Highlights

6 years of experience leading novel ideas in sensing and imaging. Explored the potential of FMCW radar for fine-grained perception, including imaging and identification of hidden objects, human pose reconstruction, and activity recognition. Background in deep learning, signal processing, and the development of multi-modal prototypes. Collaborative and multidisciplinary research, partnering with an external team.

Experience

Graduate Research Assistant — **January, 2019 — Present**
SyReX Lab - University of South Carolina — *Columbia, SC, USA*

- Develop and publish novel ideas in ubiquitious sensing and imaging under challenging conditions. *(9 publications, 1 patent).*
- Build large-scale data pipelines with finely synchronized multi-modal sensors (radar, camera, audio, vital sign sensors).
- Execute large-scale signal processing, point cloud processing, filtering, and distributed training on CUDA-based GPU backend.
- Fine-tune complex ML models and benchmark them for various tasks.
- Assisted a 400+ level class on computer networks with 100+ students *(Socket programming with Java, Python, and C).*

Executive Engineer — **October, 2016 — November, 2018**
Siemens Healthcare Limited — *Dhaka, Bangladesh*

- Oversaw the technical requirements of potential clients in the medical imaging domain.
- Built liaison between the engineering department and the existing clientele.

Education

Ph.D. in Computer Engineering, *University of South Carolina* — **September , 2025** (tentative)
M.Sc. in Computer Engineering, *University of South Carolina* — **August, 2024**
B.Sc. in Electrical & Electronics Engineering, *Bangladesh University of Engineering & Technology* — **March, 2016**

Skills

Software Engineering: Python, C++, MATLAB, Java, HTML, Git version control, Shell scripting, Linux.
ML libraries: PyTorch, TensorFlow, Keras, TensorBoard, Ray Tune, Scikit-learn, MATLAB Deep Learning.
ML models: Graph Neural Network, Vision Transformers, Generative Adversarial Network (GAN), Autoencoder, Few-shot Learning, LSTM.
Foundation ML models: MobileNet, ResNet, Mediapipe, HRNet, Whisper, WhisperX, BERT, Sentence-BERT.
Computational skills: Range-angle, Micro-doppler, Antenna array (FMCW radar), PCD processing, Clustering, STFT, Wavelet, DTW.
Tools: TI mmWave Studio, RTAB-Map (SLAM), Robot Operating System (ROS), FFmpeg, OpenCV.

Projects

- **Imaging hidden objects with handheld millimeter-wave devices** *(SAR, Compressed sensing, Clustering, GAN, Ray-tracing)*
  - Leverage Synthetic Aperture Radar (SAR) principle to enable imaging from a small antenna array.
  - Overcome sparse sampling and motion non-linearity with signal processing methods. *(compressed sensing, unsupervised clustering)*
  - Overcome information loss in reflected wireless signal through cGAN-based image super-resolution.
  - Overcome the lack of ground truth data through ray-tracing based simulation of wireless signal reflections.

- **Co-existence of human-activity sensing on indoor wireless system** *(3D pose, Range-angle, μ-doppler, Graph Neural Network, Xformer)*
  - Graph neural network pipeline to overcome low-rate sensing signal due to co-existing networking.
  - Graph and Recurrent neural network (LSTM) to estimate 3D posture sequence of a human body as joints' coordinates.
  - Deployment of activity recognition model on a real-time system ($\sim$98% prediction accuracy with $\sim$2s initial latency).
  - Explored the Transformer model to develop an end-to-end system leveraging range-angle-doppler heatmaps sequence.

- **Automated NIH stroke scale segmentation from multiple sensors** *(Multi-modal sensors, Pose from images, Audio Speech Recognition)*
  - Built multi-sensor prototype with fine hardware-software synchronization *(4k camera, microphone array, smartwatch, wireless)*.
  - Posture analysis through body joints tracking with Mediapipe and HRNet.
  - Speech assessments through Audio Speech Recognition (ASR) with Whisper and WhisperX.
  - Cognitive assessments through Large Language Models (LLM), BERT and Sentence-BERT.

- **Two-stage facial palsy scoring from single images** *(Image processing (OpenCV), CNN, Health AI)*
  - Mapping facial keypoints with Mediapipe to create Regions of Interest (ROI) for pathologic assessments.
  - Proposed an image pre-processing pipeline to mask identity and lighting condition from image inputs.
  - Achieves high recall ($\sim$95%) but low precision ($\sim$ 70%) in the identification of healthy individuals.
